# TOP WORK

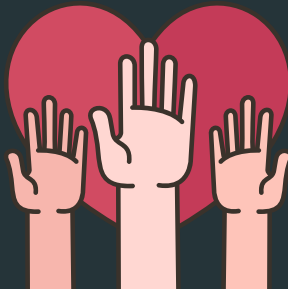

## ACADEMIC

- AI based temperature prediction simulation deployed on Linode.
- Cloud based image hosting service deployed on Digital Ocean Droplet.
- AES based image encryption service deployed using jsp servlet on tomcat server.
- Card matching memory game developed in java using swing components.

## COMMERCIAL

- Mock UP Generator for book store.
- Components based cost calculation system for game store.
- Payment gateway enhancement for a leading NGO.

## VOLUNTEERED

- CAPTCHA based validation mechanism development for Indian Academic Origins App.
- Data annotation for redical posts analysis research.
- Website developement for an educational institution

# ABOUT ME

I am a tech enthusiast from my childhood so, I pursued technical education and I want to grow more in the field and take best steps to do so and over the time I realize technology is not about me but about us. In any good working system there are hundred and thousand of components working together to run a system smoothly which perfectly make sense as a great team work. If I am 1 then team of two is 11 and three is 111. I do not believe in impression but expression so most of time I build my projects from scratch and there is 70% success rate as of now.

Some of undocumented things I am good at:

- Event coordination
- Graphic design
- Project planning
- Strategic Planning
- Teaching

Some of documented things I am good at:

- Software development[Small scale]
- Web development[Small to medium scale]

Some of the things I am quite good at messing up:

- Badminton
- Dancing
- Drawing
- Singing
- Writing

Some of the things not made for me:

- Good handwriting
- Long lectures
- Outdoor sports

Thank you for visiting my website with patience and your valuable time investment
